EDITION-161

DECODING CANCER ACROSS SPECIES

A recent large-scale study mapping the genetic landscape of cancer in cats analyzed 500 tumor samples spanning 13 different cancer types, making it one of the most comprehensive efforts in feline oncology to date. Researchers identified 31 key cancer-driving genes, many of which overlap with human cancer pathways, including the widely known TP53 mutation found in ~33% of feline tumors—closely mirroring human cancer data. The study also highlighted significant findings in feline mammary tumors, where mutations in FBXW7 were observed in over 50% of cases, aligning with patterns seen in human breast cancer. Advanced genomic sequencing techniques enabled researchers to detect mutation patterns, copy number variations, and potential therapeutic targets, with some mutations showing responsiveness to existing anticancer drugs. Overall, the study reinforces the One Health concept, emphasizing how feline cancer research can accelerate precision oncology advancements for both veterinary and human medicine.

TOCERAPET

10, 15, 50 mg tablets

10 x 1 x 4 tablets

OCOXIN

A HISTORIC MILESTONE IN VETERINARY ORTHOPAEDICS

Dr. Milind Hatekar leads Pune's first advanced Total Hip Replacement (THR), setting a new benchmark in small animal orthopaedics and redefining what's possible in companion animal care.

This landmark achievement reflects years of surgical expertise, precision, and an unwavering commitment to excellence bringing world class orthopedic solutions closer to pets in India.

Total Hip Replacement is a truly life changing intervention for pets suffering from severe hip dysplasia and degenerative joint disease, helping restore mobility, eliminate chronic pain, and significantly improve quality of life.

Here's to innovation that restores movement, comfort, and gives our furry companions a second chance at an active, pain-free life.

GRAPITAIL

Grapiprant 60 mg & 100 mg

10x1x6 tablets

FIROtail

Firocoxib Chewable tablets 57 / 227 mg

10x1x6 tablets

Condrovet

1 x10 x 26 tablets

HORMONES & THE AGING BRAIN

A new study from the University of Arizona is set to explore how growth hormones influence cognitive aging in dogs, addressing a surprising paradox in canine biology: while large dog breeds have shorter lifespans, their brains appear to age at a similar rate as smaller dogs. Led by Evan MacLean, the research will focus on the hormone IGF-1, which regulates body size and may play a key role in brain aging and longevity. The project called the SIGNAL study (Study of IGF-1, Neurocognitive Aging and Longevity) aims to determine whether differences in circulating IGF-1 levels affect how dogs age cognitively, regardless of their size. These insights could be transformative, not only for understanding and managing canine cognitive dysfunction (similar to dementia) but also for advancing human aging research, as dogs share comparable environments, diseases, and aging patterns with humans.

VIVALDIS EVENTS

Vivaldis at WSAVA 2026 – Connecting Innovation with Veterinary Care

We were proud to sponsor the 24th WSAVA CE Indore, one of the most significant gatherings of veterinary professionals in the country. Over three transformative days, we had the privilege of engaging with 500+ veterinarians, global experts, and forward-thinking clinical discussions shaping the future of animal healthcare. But beyond the insights shared on stage, what truly stood out were the conversations at our stall—real practitioners, real challenges, real clinical needs, and that's where our purpose becomes clear. At Vivaldis, we go beyond offering products—we are committed to bridging the gap between science and clinical practice, because better outcomes for animals begin with empowered veterinarians. A heartfelt thank you to every veterinarian who connected with us, shared experiences, and continues to inspire us to push boundaries in animal healthcare.

VIVALDIS EVENTS

Planting Today for a Healthier Tomorrow

This Earth Day, we went beyond words, we got our hands in the soil. We partnered with Hope Givers Foundation at Bakori Hills, Pune and planted Neem, Vad, Pimpal, and Kadu Limb trees. Trees that give shade to strays, clean air to our pets, and healthier surroundings for all of us humans and animals alike. Because at Vivaldis, we don't just care for animals in clinics, we care for the world they live in.

Annual Meet 2026

This is what Vivaldis is made of.

Our Annual Conference in Goa was more than just a gathering it was a perfect blend of impactful sales & marketing discussions, strategic alignment, and meaningful team bonding. From insightful meetings to moments of connection, it truly was everything and more. Grateful for a team that shows up with energy, passion, and heart every single time. Here's to the people behind the purpose.
